

SMP Logic Systems Announce International Release of Intellivax™

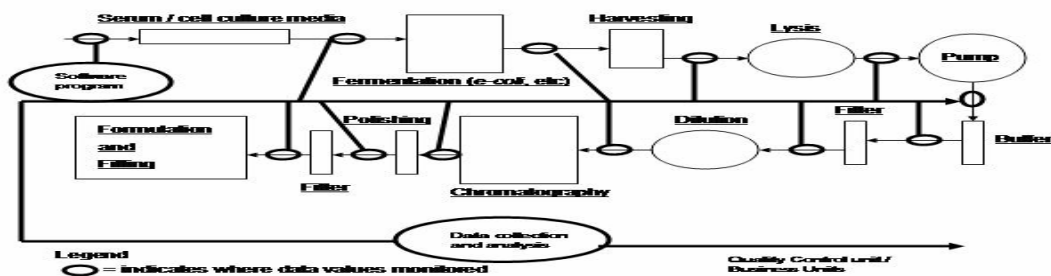

SANTA MONICA, CA, May 2, 2008 – SMP Logic Systems, a research based software development company focusing exclusively on pharmaceutical manufacturing industries, announce today that it has launched Intellivax™ as its first international product in the Latin American and Caribbean markets.

Intellivax™ is a fully integrated intelligent execution system specifically for vaccine manufacture. Intellivax™ integrates all aspects of vaccine manufacturing to allow manufacturers to consistently produce high-quality vaccines. Intellivax™ offers several key features including proprietary analysis tools to continuously monitor all aspects of vaccine production and allow for a risk-based assessment in case of quality deviation.

“We are pleased to offer Intellivax™ as our first product directed to international markets.” said Shane M. Popp, Founder of SMP Logic Systems. “Vaccines are an extremely cost-effective public health measure; however, they must be consistently manufactured in a manner such that they are safe and effective so that each lot produced must be the same as the next.”

Intellivax™ can be modified to conform to any vaccine manufacturing process including upstream processes, cell harvest or product separation processes, downstream processes, formulation or fill processes, or any combination thereof.

“We believe the public health capacity, such as vaccine manufacture, in Latin America and the Caribbean will continue to grow and allow us to develop our core competency in this emerging market.” Mr. Popp added.

About SMP Logic Systems

SMP Logic Systems is a research based software development company focusing exclusively on pharmaceutical manufacturing industries. Its products aim to revolutionize pharmaceutical manufacturing processes and systems allowing manufacturers to fully integrate process controls. SMP Logic Systems offers several platform technologies that enable pharmaceutical manufacturers to monitor and track the entire manufacturing process from inception to completion. The Company's offices are located in Santa Monica, CA. For further information about SMP Logic Systems, please visit www.smplogicsystems.com
